

— QUARTERLY REPORT · OCTOBER 2026

Online orders are up. Your website is the bottleneck.

What changed this quarter, what is costing you orders, and the five fixes we recommend before the holidays.

01 · SUMMARY

Three numbers explain the quarter

Orders grew because people want your coffee, not because the website helps them buy it.

+38%

online orders compared with Q2, driven by Instagram and Google Maps.

4.1 s

to load the menu on a phone. Customers expect less than 2.5 s.

62%

of phone visitors leave on the menu page without ordering.

WHAT IS HOLDING YOU BACK

The menu is a **9 MB PDF**. On a phone it loads slowly, cannot be searched and has **no order button**.

WHAT IS WORKING

Instagram brings **41% of new customers**, and regulars order **2.3 times a month**.

02 · WHERE ORDERS COME FROM

Instagram brings the people. The website loses them.

Orders by channel, July to September 2026.

CHANNEL	ORDERS	SHARE	VS Q2	NOTE
Instagram to website	1,240	41 %	+64 %	Most new customers start here, then hit the menu page.
Google Maps	780	26 %	+22 %	People searching “coffee near me”. Reviews average 4.7.
QR code in the café	510	17 %	+9 %	Table cards. Works well at lunchtime.
Delivery apps	330	11 %	-12 %	30 % commission. Falling since the price change.
Newsletter	150	5 %	+3 %	Small list of 1,900 people, but the highest order value.

What this means. Every channel ends on the same menu page, so that page decides how many visits become orders.

Fix the menu first

It sits between every channel and every order.

Keep Instagram weekly

Your best channel, and it costs nothing but time.

Leave the apps alone

Move app customers to direct orders with a 10 % code.

— 03 · THE PROBLEM

Two problems, one cause

THE MENU PAGE

A 9 MB PDF nobody can use on a phone

The menu is a scanned PDF from 2023. It takes 4.1 seconds to open on 4G, the text is too small to read without zooming, and three prices are out of date.

There is no order button on it. A customer who has decided has to go back, find the order page and search again.

CHECKOUT ON A PHONE

Seven taps between hungry and paid

Ordering a flat white takes seven taps and two page loads. For a small menu, three is normal.

Payment only accepts cards typed by hand. Apple Pay and Google Pay would remove two of the seven taps.

THE RULE FOR NEXT QUARTER

Every tap between “I want a coffee” and “paid” **costs you orders.**

Fix the path from menu to payment before adding anything new to the website.

04 · THE PLAN

Five fixes before the holidays

- 01 Replace the PDF menu with a real menu page — week 1**
Searchable, readable on a phone, with photos and an order button on every item.
- 02 Cut checkout to three taps — week 2**
Add Apple Pay and Google Pay, and remember returning customers.
- 03 Load in under 2 seconds — week 2**
Compress the photos and remove the unused booking plugin.
- 04 Add a 10 % direct-order code — week 3**
Printed on delivery-app bags, to move app customers to your own site.
- 05 Measure and report — week 6**
Orders, menu-page drop-off and load time, compared with this report.

NOTHING GOES OFFLINE

The current site stays live while we build. Each change ships on its own and can be undone.

05 · WHAT WE NEED FROM YOU

Menu, prices and 12 photos

A current list of drinks and food. We shoot the photos on a Tuesday morning.

Access to your payment provider

To switch on Apple Pay and Google Pay. Ten minutes on a call.

Let's fix the menu before the holidays.

Reply to this report or call us. We can start on Monday.

Nov 3

New menu page and faster site live.

Nov 24

Three-tap checkout live, before the holiday rush.
