

{ Quarterly report }

Three numbers explain the quarter

What changed, what it is costing you, and the one fix we recommend before the holidays.

{ 01 Summary }

Orders grew. The website did not.

People want your coffee. They are buying it in spite of the menu page, not because of it.

+38 %

online orders against Q2, almost all of it from Instagram and Google Maps.

4.1s

to load the menu on a phone. People expect it in under two and a half.

62 %

of phone visitors leave on the menu page without ordering anything.

What is holding you back

The menu weighs 4.1 MB. On a phone it crawls, and two out of three people give up before they reach the order button.

What is working

Instagram brings 41 % of new customers, and those customers come back 3.2 times a month.

{ 02 Channels }

Instagram brings them. The menu loses them.

Channel	Visits	Share	Change	What it means
Instagram to website	1,240	41 %	+64 %	Most new customers start here, then hit the menu page.
Google Maps	780	26 %	+22 %	People searching for coffee nearby. Reviews average 4.7.
QR code in the shop	510	17 %	+9 %	Table cards. They work best at lunchtime.
Delivery apps	330	11 %	-12 %	Thirty per cent commission, and falling since the price change.

01

Rebuild the menu page

Compress the photos and drop the slider. Target is under two seconds on a phone.

02

Put the order button first

Above the fold, on every page, in one colour that nothing else uses.

03

Measure it again in December

Same three numbers, same report, so the comparison is honest.
